

To install ActiveMQ on Linux, you can follow these steps:

1. Download the latest version of ActiveMQ from the official website. You can use the following command to download it directly from the terminal:

```
wget  
https://archive.apache.org/dist/activemq/5.16.3/apache-activemq-5.16.3-bin.  
tar.gz
```

2. Extract the downloaded file using the following command:

```
tar -xzf apache-activemq-5.16.3-bin.tar.gz
```

3. Move the extracted directory to a location of your choice. For example, you can move it to `/opt` using the following command:

```
sudo mv apache-activemq-5.16.3 /opt/
```

4. Set the `ACTIVEMQ_HOME` environment variable to the directory where you extracted ActiveMQ. You can add the following line to your `~/.bashrc` file:

```
export ACTIVEMQ_HOME=/opt/apache-activemq-5.16.3
```

5. Reload your `~/.bashrc` file using the following command:

```
source ~/.bashrc
```

6. Start ActiveMQ using the following command:

```
$ACTIVEMQ_HOME/bin/activemq start
```

7. Verify that ActiveMQ is running by accessing the web console at `http://localhost:8161/admin/`. You should see the ActiveMQ web console login page.

That's it! You have successfully installed ActiveMQ on Linux.
